INNOVATIONS
Grand Prize Winner
2010

BUILDINGS [10] 10 61

For the 15th year, *BUILDINGS'* annual Product Innovations program — exclusively for exhibitors at NeoCon World's Trade Fair, which was held this past June in Chicago — is recognizing aesthetic, functional, and high-performance products. This year, the judging committee chose seven Grand Prizes and 11 Merit Winners from seven categories —

Computer Solutions, Energy Efficiency Solutions, Environmental Solutions, Product Performance Solutions, Workplace Aesthetics Solutions, Workplace Flexibility Solutions, and Workplace Productivity Solutions. Each winner stood out as a product that can help you succeed in beautifying your workspace while benefiting the environment and your bottom line.

GRAND PRIZE — NOVALinked is a networking system that provides complete control of NOVA's Trolley E-Class units. When the system is in "networked" mode, the instructor or presenter controls every Trolley unit in the classroom. When in "local" mode, each workstation controls the individual Trolley unit. *More information at (800) 730-6682 or www.novadesk.com. NOVALinked by NOVA Solutions, Inc. Circle 271.*

GRAND PRIZE — The Stealth Panel by Concord Products marries cutting edge technology with office furniture — creating an innovative, functional, and environmentally friendly computing system. The panel features Bluetooth technology, added USB ports, and a patented UPS backup system. Solar power capability is an optional feature. The panel can operate at 92 degrees F. and has no internal moving parts — so don't worry about sounds or dust build-up. *More information at (856) 933-3000, www.concordproducts.com or www.concordmicrocomputer.com. Stealth Panel by Concord Products. Circle 272.*

GRAND PRIZE — Partnering with European company Graboplast, Tech Design Floors offers Grabo Silver Knight. This resilient vinyl sheet flooring has a photocatalytic disinfecting surface, thanks to both NanoSilver and Nano TiO₂. Harmful organic and inorganic substances are transformed into harmless compounds through a chemical oxidation process. An independent test of this "self-cleaning" flooring certifies that it will eliminate more than 99% of various types of viable bacteria. *More information at (440) 519-1957 or www.techdesignfloors.com. Grabo Silver Knight by Tech Design Floors. Circle 273.*

GRAND PRIZE — Offering a life span of up to 50,000 hours, Conflux by Teknion is an energy-efficient lighting collection. The collection regulates and reduces energy usage by using a Passive Infrared (PIR) sensor that works based on the user's body heat. Conflux features a USB port that allows users to plug in an electronic device; in addition, the desk lamp features a wireless charging Powermat base. *More information at (877) 835-6466 or www.teknion.com. Conflux by Teknion. Circle 274.*

GRAND PRIZE — Carpet tiles by PURE Contract Carpets are now compatible with the TacFast LocPlate system substrate. The flooring surface and substrate attach by hooks and loops — creating a mechanical bond that securely holds the flooring surface in place. The LocPlate product line can be installed over any subfloor. The added loop to the underside of the carpet tiles reduces the weight of the tile, makes it compatible for the LocPlate technology, and applies to a broad range of end-user applications. *More information at (800) 451-1250, www.purecontractcarpets.com or www.tacfast.com. TacFast Systems by PURE Contract Carpets. Circle 275.*
