## Tacfast eliminates adhesive

THE **TACFAST** system is said to eliminate the need for adhering the floorcovering to the substrate, instead relying on a mechanical hook and loop fastening system.

Using an interlocking disc and plate system, TacFast delivers a stable substrate above the subfloor so there is no need for complex subfloor preparation or moisture barriers.

The hook and loop system is reported to allow rapid installation of the floorcovering, creating a stable surface that can be quickly

lifted for access or replacement.

'The TacFast system has gathered recognition for the speed and ease it offers contractors,' says Jonathan Stone from TacFast Systems International.

'The UK represents an excellent opportunity to work with carpet tile, LVT and ceramic manufacturers to develop a system that makes installation in a wide range of locations simpler.'
