TacFast – the cost-cutting solution

Budget is often the biggest limiting factor for those working on commercial projects, but with the TacFast flooring installation system, cost concerns can be a thing of the past.

The revolutionary mechanical fix system sits above the subfloor, providing a simple, speedy and cost-friendly way of fitting floors.

Featuring a unique interlocking disc and plate system that sits above the subfloor and a hook and loop fastening system that rapidly attaches the floorcovering, TacFast acts as a leveller and often eliminates the need for expensive and extensive subfloor preparation. What is more, the system

does not require adhesives with lengthy drying times, saving both time and money.

The TacFast system also acts as a DPM, eradicating any expensive maintenance costs potentially caused by damp. The essential ingredient of TacFast, the polypropylene LocPlate plates, work as a water barrier to prevent any moisture migrating through the subfloor from affecting the floorcovering. Any moisture will condense between the concrete surface of the subfloor and the LocPlate layer.

Suitable for a whole host of floorcoverings, including wood and laminate planks, carpet tiles, ceramics,

natural stone and LVT, the TacFast system is ideal for large-scale projects that require multi-floor installation.
