Speedy and simple installation

Modern commercial environments often require the installation of a multitude of floorcoverings, and with TacFast, flooring contractors can apply the same installation method across the board.

Based around a core technology of detachable attachment, which is incredibly popular in the USA, TacFast is a speedy and simple installation process that will truly revolutionise the fitting process across a range of flooring surfaces.

Suitable for use with wood and laminate planks, carpet tiles, ceramics, natural stone and LVT, the TacFast system provides fast installation for many different types of floor. Contemporary commercial environments, such as offices, tend to create zonal areas with their flooring, using LVT for kitchen areas, carpet tiles for communal work spaces and wood for break-out zones – and

TacFast works with all of these types of floor.

Ideal for time-sensitive projects, TacFast eliminates the need for attaching the floorcovering to the subfloor adhesively. TacFast is a unique interlocking disc and plate system that sits above the subfloor and acts as a DPM, leveller and mechanical fixer in one.

With a hook and loop fastening system, floorcoverings can be rapidly attached without the need for glue or lengthy drying times.

Eradicating the need for a complex subfloor preparation, another major benefit of the TacFast method is that the floorcovering can also be quickly removed or replaced – ideal for refurbishment periods or multi-location businesses.
